

## Vehicle Management Software (VMS)

The Vehicle Management Software is aimed at improving resource efficiency and quality and decreasing resource consumption.

The Vehicle Management application is designed to keep records of data on the company vehicles, vehicle registration planning and registration records, vehicle insurance, planning and record-keeping of regular and irregular services, records of planned and realized working tasks, records of reported defects and their solution, records of fuel consumption and kilometers travelled.

- Recording data on all vehicles
- Registration planning and registration records
- Vehicle insurance
- Planning and record-keeping of regular and irregular services, checks and repairs
- Record-keeping of planned and realized working tasks
- Record-keeping of reported defects and their solution
- Record-keeping of fuel consumption and kilometers travelled
- Record-keeping of tires change

These processes are defined in several modules that constitute the information system for fleet vehicle management as follows:

- Administration module
- Vehicle module
- Vehicle service module

Finally, we would like to note that Elikosoft with its team is available to all clients interested in any kind of information.
